K Mohammed Fazil
Developer

Requirements

The user wants to search the list of trains that are available between the source and destination places, where the places' names are officially registered within the state of Tamil Nadu in India.

New user registration/existing user login functionality is required. The number of users will range from 1M to 10M.

User input requires proper validation to avoid malicious activities, and the session should be retained in case of abrupt exit/graceful exit/logout from the application.

Users can print (as Excel or PDF) or share the search information to their email.

The application should be accessible anytime (zero downtime) and anywhere to the user, and the user can share his feedback about the application.
